

★★★ Must Read (closest to your PS)

1. IndicGuard: A Multilingual Safety Guard Model and Dataset for Indic Languages (2026)

Why it's relevant

Almost the exact area you're proposing.

It introduces:

- Indic safety dataset
- multilingual safety guard
- jailbreak evaluation
- Indic language moderation

You'll almost certainly compare against this work.

<https://arxiv.org/pdf/2606.22841>

2. IndicJR: A Judge-Free Benchmark of Jailbreak Robustness in South Asian Languages (EACL 2026)

Why it's relevant

This is probably the strongest benchmark paper.

It studies:

- 12 Indic languages
- jailbreak attacks
- Romanized text
- code-mixed prompts
- attack success rates

Very close to your proposed dataset.

<https://aclanthology.org/2026.eacl-industry.50.pdf>

3. Languages Change, Safety Weakens: Jailbreaking LLMs Across English and Indian Languages (2026)

Exactly your research problem.

Shows:

- English safety $\neq$ Indian language safety

- Hindi
- Marathi
- Bengali
- Telugu
- multilingual jailbreaks

Also introduces Indic-JailbreakBench.

<https://openreview.net/pdf?id=TioFTA4y9E>

4. BHRAM-IL: Benchmark for Hallucination Recognition in Multiple Indian Languages (2025)

Most relevant paper for hallucination detection.

Languages include:

- Hindi
- Gujarati
- Marathi
- Odia
- English

Useful if your project includes hallucination detection in addition to safety.

<https://aclanthology.org/2025.bhasha-1.9.pdf>

★★ Strong Supporting Papers

5. Llama Guard: LLM-based Input-Output Safeguard (Meta, 2023)

This is the standard safety baseline.

Most papers compare against Llama Guard.

You can benchmark your model against it.

<https://arxiv.org/pdf/2312.06674>

6. JailGuard: Universal Detection Framework for Prompt-based Attacks (2025)

<https://dl.acm.org/doi/epdf/10.1145/3724393>

Focus:

- prompt injection
- jailbreak detection
- defense mechanisms

Good reference for evaluation methodology.

7. Mātrkā: Multilingual Jailbreak Evaluation of Open-Source LLMs

Introduces multilingual jailbreak strategies.

Includes:

- mixed-language prompts
- translated prompts
- homoglyph attacks
- structural variations

Useful for designing adversarial prompts.

<https://aclanthology.org/2025.bhasha-1.10.pdf>

8. Detection and Analysis of Prompt Injection in Indian Multilingual LLMs

Very relevant.

Studies:

- Indian multilingual models
- prompt injection
- safety failures

Good literature review source.

<https://www.nature.com/articles/s41598-026-43883-0>

★ Hallucination Papers

9. MultiHaluDet

Focus:

- multilingual hallucination detection
- cross-language transfer
- hidden-state probing

Useful if you include hallucination classification.

<https://aclanthology.org/2026.mellm-1.6.pdf>

10. BHRAM-IL

Besides benchmarking, it discusses:

- factual hallucinations
- reasoning hallucinations
- multilingual evaluation

This is probably the benchmark you'd evaluate on or extend.

<https://aclanthology.org/2025.bhasha-1.9.pdf>

★ Multilingual Safety Papers

11. SEALGuard

Not Indian-language specific, but highly relevant.

Shows that English guardrails perform significantly worse on multilingual prompts and proposes a multilingual guard model trained on a new benchmark.

<https://arxiv.org/pdf/2507.08898>

★ Indian NLP Models (implementation references)

These aren't safety papers but are useful for your model choice.

- **MuRIL** (Google) – multilingual representation learning for Indian languages.
- **IndicBERT** – transformer model for Indic languages.
- **AI4Bharat IndicBERT v2** – stronger updated Indic encoder.
- **XLM-RoBERTa** – multilingual baseline.
- **mBERT** – multilingual BERT baseline.

These are excellent candidates for fine-tuning your classifier.
